

## **CABTC Policy: Flooring in Suite B - Agility Side**

---

**In an effort to preserve our new flooring each person is encouraged to individually take responsibility for the floor.**

- Exercise pens are **ONLY** allowed on the blue mats that are located along the right wall, outside the Men's bathrooms.
  - At no time are PENS ALLOWED to be placed directly ON THE **NEW** BLACK MATTING.
- Crating for trials or seminars, etc., needs to have appropriate padding beneath each crate.
- Chairs on the floor should have padding between the legs and the floor.
- Dog nails are to be kept trimmed smooth and short.
- Doggie accidents are to be cleaned up immediately using spray and towels.
  - The accidents need to be washed well enough that there is no visible residue remaining, as in the case of vomit or BM.
- No "tacky paw" or related traction products allowed on dog paws.
- Human footwear: no spikes of any kind are allowed on the floor.
- Do not Drag Equipment on the floor. This especially includes the weaves, contacts and even the chute. Lift and place equipment onto the floor where it will be used. There must be an adequate number of people helping with the move so that no dragging occurs.
  - As stated above weave poles must be carried, not dragged, and the center of the poles properly supported.
- Contact Obstacles have specific pieces cut for them which are to be kept with each piece of equipment and placed between the feet/edges and floor.
  - Move the A-frame with the A-frame mover. Put cushions under each A-frame end where each contacts with the floor.
  - Two people should always move the Teeter. Remove the sandbags and lift from each end.
  - Dog walk will always be disassembled for moving and cushion(s) put under each foot and where the ramps contact the floor.

**Thank you everyone,**

**Debbie Sacerich Agility Training Director**
